Education

Gujarat Law Society University, Gujarat

B.Tech. in Computer Engineering (AIML)

June 2023 – Present

CGPA: 6.53/ 10 till 6th sem.

CGPA: 7.47/10 in last 3 sem.

Projects

Unfold-7: North-East Tourism Platform.

Aug 2025 – Dec 2025

- Developed a full-stack tourism platform showcasing destinations, accommodations, itineraries, and local attractions across India's seven northeastern states.
- Built a responsive user interface using React and integrated a Django backend to manage dynamic travel content and user interactions.
- Implemented location-based search, destination filtering, and personalized travel recommendations to enhance trip planning.

Eco-Drishti: Hybrid AI-Powered Waste Intelligence System.

AITR Hackathon

- Developed an AI-powered waste management system using YOLO-based computer vision for real-time waste detection and classification.
- Built an intelligent recommendation engine and integrated an AI chatbot to provide waste segregation guidance, recycling information, and user support through natural language interactions.
- Designed an interactive dashboard to visualize waste analytics, chatbot insights, and collection trends using a scalable full-stack architecture.

IIT-Bombay FOSSEE Workshop Portal Redesign.

IIT-Bombay Fellowship

- Redesigned the FOSSEE Workshop Portal using React to improve usability, accessibility, and the overall user experience for students and instructors.
- Developed responsive and reusable React components with modern UI principles to enhance navigation, performance, and cross-device compatibility.
- Integrated interactive data visualizations and maps using Chart.js and D3.js to present workshop statistics and geographical insights.
- Optimized the frontend by consuming REST APIs, improving page load performance, and ensuring seamless interaction with the existing Django backend.

Air Quality Prediction Using AI.

Jan 2024

- Developed an AI-based air quality prediction system using machine learning models to forecast AQI levels from historical environmental data.
- Performed data preprocessing, feature engineering, and exploratory data analysis to improve model accuracy and prediction reliability.

- Trained and evaluated multiple machine learning algorithms to identify the best-performing model for air quality forecasting.
- Built an interactive dashboard to visualize AQI trends, pollution forecasts, and key environmental indicators for informed decision-making.

Experience

Edunet - UpSkill Campus.

Feb 2026 – Mar 2026

Python Intern

Remote

- Developed and deployed multiple Python-based applications, including a URL Shortener, File Organizer, Password Manager, and Quiz Game, focusing on clean architecture and modular code.
- Built backend functionality using Python, Flask, SQLite, and file handling, implementing features such as URL mapping, secure credential storage, and automated file organization.
- Applied object-oriented programming, exception handling, and version control (Git/GitHub) while following software development best practices.

Technical Skills

Languages: Python, C, C++

Frameworks: PyTorch, TensorFlow, Streamlit, FastAPI

Libraries: NumPy, Pandas, Scikit-learn, OpenCV, NLTK, Matplotlib, Seaborn

Tools & Platforms: Git, GitHub, VS Code, Jupyter Notebook, Google Colab

Core Areas: Artificial Intelligence, Machine Learning, Deep Learning, Computer Vision, NLP, Generative AI, Data Visualization, Python.

Certifications

Career Essentials in Generative AI by Microsoft and LinkedIn.

Introduction to Java Programming by Coursera.
