

Abhinav Gahlaut

Ahmedabad, India

abhinav.gahlaut@gmail.com | +91 8141724623 | GitHub | LinkedIn

Summary

AI Engineer specializing in Agentic AI, OSINT, and intelligent automation systems. Experienced in building production-grade AI products, multi-agent architectures, AI-powered platforms, and autonomous workflows across research, engineering, and product domains.

Technical Skills

Languages: Python, JavaScript, TypeScript, Solidity, C/C++, Bash

AI/ML: PyTorch, TensorFlow, Scikit-learn, Transformers, OpenCV, NLP, Deep Learning

Agentic AI: Claude Code Max, Antigravity, Kiro, OpenCode, MCP Servers, Multi-Agent Systems, Context Engineering, Token Optimization, AI Workflow Automation

Backend: FastAPI, Node.js, Express.js, REST APIs, Uvicorn

Tools: Git, GitHub, Playwright, Obsidian, Graphify, Linux, VPS Deployment, VS Code, Jupyter, Colab

Experience

AI Engineer Intern, GlobalVox Inc.

Apr 2026 – Present

- Architected autonomous AI systems and products, consulting directly with international clients and leadership.
- Engineered production workflows using Claude Code Max, Kiro, Antigravity, and MCP ecosystems.
- Built OSINT intelligence pipelines and AI-powered lead-generation systems for business growth.
- Developed AWS-based face recognition and liveness detection for enterprise identity verification.

Chairman, GLS ACM Student Chapter

Nov 2025 – Present

- Founded and scaled chapter to 45+ members; orchestrated campus-wide hackathons, workshops, and mentorship initiatives.

Co-Founder & AI Engineer, Bhoomic Co.

Sep 2025 – Present

- Building an AI + IoT powered AgriTech platform focused on smart agriculture, automation, and decision-support systems.

Projects

INDRA OS — Operating System for AI Workforces

GitHub

- Built an AI-native OS to manage, govern, and orchestrate agents across Claude Code, Codex, Gemini, Kiro, OpenCode, and Antigravity.
- Designed a 33-service architecture featuring observability, knowledge graphs, trace synthesis, RBAC, telemetry, and agent orchestration capabilities.

XINT — OSINT Network Intelligence Platform

GitHub

- Developed a production-grade OSINT platform featuring network intelligence, graph analytics, cross-platform enrichment, identity resolution, and Playwright-based automated reconnaissance.
- Built the XINT Bias Agent, a Gemini-powered coprocessor with MCP integrations, investigative dashboards, and evidence-based classification pipelines.

PixGuard.ai — AI-Based Image Protection System

GitHub

- Engineered a modular adversarial defense architecture combining image analysis and policy evaluation to protect against deepfake reconstruction and unauthorized AI model extraction attacks.

Vedic Chandas Identification Engine

Ongoing — Private Repo

- Building a Sanskrit computational linguistics platform for automatic Vedic meter identification across the Vedic Samhita corpora using hybrid rule-based and ML-assisted approaches.
- Implementing OCR integration, padapāṭha reconstruction, sandhi resolution, and explainable classification pipelines.

Leadership & Achievements

- Finalist – Smart India Hackathon (SIH 2025), 0xGenIgnite, HwUP, and Cybershadez Techathon
- Selected among Top 40 students in India for ACM India Summer School 2025 - KARE, Madurai, TN
- Merit Scholarship recipient for 3 consecutive academic years

Education

B.Tech in Computer Science & Engineering

GLS University, Ahmedabad, GJ

2023 – Present

- CGPA: 9.3+ | Specialization: Artificial Intelligence & Machine Learning
- Capstone: **yatri.ai** – AI-powered personalized tourism recommendation platform achieving 92% recommendation accuracy across 12 Indian states.
