PROFESSIONAL SUMMARY

Final-year B.Tech Computer Science (Artificial Intelligence) student, actively involved in building and deploying Machine Learning and AI/ML models, including deep learning solutions using PyTorch and TensorFlow. Expertise spans data collection, preprocessing, feature engineering, and model development and evaluation, with additional experience in data analysis, SQL, and dashboard creation using Tableau and Power BI. Passionate about developing AI-driven solutions and applying data science techniques to solve real-world problems, with a strong interest in structured prompt engineering, LLMs, and RAG.

TECHNICAL SKILLS

Programming	Python, Java, C, C++, JavaScript, PHP, HTML
Core CS	Data Structures & Algorithms, Object-Oriented Programming (OOP), Database Management Systems (DBMS), Statistics
Machine Learning	Data Science, NumPy, Pandas, Matplotlib, Scikit-learn, Data Cleaning, Data Preprocessing, Feature Engineering, Model Evaluation, Seaborn, Exploratory Data Analysis (EDA)
Deep Learning	PyTorch, TensorFlow
Generative AI	Structured prompt engineering (role, context, task, format, and constraint design for LLMs)
Database	MySQL
Version Control	Git, GitHub
Visualization / BI	Tableau, Power BI
Tools	VS Code, Linux, REST APIs, Graphify, Obsidian, Antigravity

EDUCATION

GLS University, Ahmedabad	2023 – Present
B.Tech, Computer Science & Engineering (Artificial Intelligence) — CGPA: 6.24/10	
Capstone Project: CyberScan — ML-based Man-in-the-Middle attack detection system (team project with cybersecurity specialization)	
- Built a Random Forest classifier (Scikit-learn) to detect and classify MITM attacks — DNS Spoofing, SSL Stripping, Session Hijacking, and ARP Spoofing — from live network traffic in real time. - Engineered 21 packet-level features and handled preprocessing/encoding for real-time single-packet inference, integrated into a teammate’s live network-monitoring pipeline.	

PROJECTS

Automated Medical Diagnostic Assistant
- Built a deep learning web application to detect 17 pulmonary conditions from chest X-rays using PyTorch and EfficientNet-B0. - Implemented Grad-CAM explainability and deployed real-time inference with FastAPI and a PWA frontend.
Bank Customer Churn Prediction
- Analyzed 10,000+ customer records to identify churn risk using Python, Pandas, and NumPy. - Built and evaluated classification models in Scikit-learn and visualized insights with Tableau.
Car Details Price Analysis
- Developed a machine learning model to predict used-car prices from historical listing data. - Performed data cleaning, analysis, and Tableau-based visualization using Python and SQL.
FitPulse — Fitness & Diet Recommendation System
- Developed a full-stack application that generates personalized diet and workout plans based on user health metrics. - Built secure REST APIs with JWT authentication and an interactive progress-tracking dashboard.

CERTIFICATIONS

- Data Science Pro — Fingertips Learning Platform (2026)
- Microsoft Power BI (Self-Learning) — Skill Course (2026)
- AI Tools Workshop — be10x (2026)
- TCS iON Career Edge — AI Foundation — TCS (2026)
