Education

GLS University

Bachelor of Technology in Computer Science & Engineering

Ahmedabad, Gujarat

Aug. 2023 – May 2027

- CGPA: 8.45/10 (Semester 5)
- Relevant Coursework: Machine Learning, Data Analytics, Human-Computer Interaction, Cryptography, Database Management

Technical Skills

Languages: Python, SQL, C/C++, Java, JavaScript, HTML/CSS

Data & ML: Pandas, NumPy, Scikit-learn, TensorFlow, Jupyter, Plotly, Tableau, BeautifulSoup

Design & UX: Figma, Adobe XD, Wireframing, Usability Testing, Prototyping

Tools: FastAPI, Git, Oracle OCI, Streamlit, Vercel

Concepts: Data Pipelines, Feature Engineering, MLOps, Anomaly Detection, UX Research, OT/ICS Security

Certifications

Machine Learning Specialization | Stanford & DeepLearning.AI

2026

OCI Data Science Professional | Oracle

2025

Google Data Analytics Professional | Google, Coursera

2025

Google UX/UI Design Professional | Google, Coursera

2025

Achievements & Competitions

Breach 2025 Fintech Hackathon – 1st Place

Apr. 2025

Financial Technology Track, PDEU · 460+ teams nationally

- Led a 5-member team to first place, building a full-stack fintech solution; selected among top teams across 460+ national entries.

Smart India Hackathon (SIH) – National Finalist

Dec. 2025

ISRO Problem Statement · Top 5 among 200+ teams

- Engineered a hybrid deep learning pipeline using cross-modal attention fusion to enhance thermal imagery for wildfire and urban heat monitoring; presented at national level.

Meta × PyTorch OpenEnv Hackathon 2026 – Top 100 / 800+

Apr. 2026

Grand Finale, Bangalore · Advanced to final round from 800+ participants

- Built The Snitch, an RL environment training an LLM overseer to audit AI agent behavior; achieved **62.1% accuracy** on held-out traces vs. 56.3% base model baseline.

Publications (In Progress)

OT/ICS Security via AI/ML: Anomaly Detection in Industrial Networks

Bias in Data Analysis and Its Impact on UX Decision-Making

Projects

InfraNova: Optical-Guided Thermal Super-Resolution | *PyTorch, Streamlit, Rasterio*

Aug. 2025 – Dec. 2025

- Built a Dual-Stream EDSR architecture fusing 10m optical and 30m thermal Landsat-8 imagery via ConvFuse + Channel Attention, achieving **PSNR 42.4dB, SSIM 0.9269, RMSE 0.0159**.
- Deployed live inference demo on Streamlit with two-phase training (decoder warmup → full fine-tuning) via earthaccess NASA pipeline; packaged into 5 documented modules.

PetPooja – AI Revenue & Voice Copilot | *Python, FastAPI, NLP, Apriori*

Nov. 2025

- Built full-stack AI copilot for restaurants combining Apriori-based PoS analytics to surface high-margin menu insights with a multilingual voice ordering system (Hindi/Hinglish/English), reducing order errors to zero.
- Delivered dual-dashboard architecture for owner analytics and real-time order management; pitched to industry judges at HACKaMINeD 2025.

F1 Race Data Dashboard (2010–2025) | *Python, Pandas, Plotly, FastAPI*

Jan. 2025 – Ongoing

- Building an interactive motorsport analytics dashboard covering 15 seasons of Formula 1 data with driver performance comparisons, lap-time distributions, and track-level insights.
- Implemented REST API endpoints to serve processed data and integrated live dashboard with ngrok-based deployment for real-time access.

The Snitch – RL Environment for AI Oversight | *PyTorch, HuggingFace TRL, PEFT, FastAPI, Docker*

Apr. 2026

- Built an OpenEnv RL environment training a Qwen2.5-1.5B-Instruct overseer (via GRPO + LoRA) to detect misbehavior in AI agents across four behavior classes; achieved **62.1% accuracy** on held-out traces vs. 56.3% baseline.
- Deployed as a live API on HuggingFace Spaces with 42/42 tests passing and full adversarial robustness validation. *Top 100 / 800+, Meta × PyTorch OpenEnv Hackathon 2026 Grand Finale, Bangalore.*
