 Ahmedabad Gujarat

SUMMARY

Motivated and technically skilled IT professional with a Bachelor's in Computer Science & Technology, offering a strong foundation in software engineering, data analysis, database management, and AI/ML. Experienced in building intelligent applications, applying machine learning models, and integrating real-time data solutions. Demonstrates excellent problem-solving and project management capabilities, with proven adaptability in collaborative, high-pressure environments.

EXPERIENCE

Smart India Hackathon 2025

- Developed a digital twin application simulating urban CO₂ emissions and capture strategies using historic data.
- Built and deployed responsive web and mobile apps via Vercel, integrating interactive 3D urban maps.
- Collaborated under tight deadlines, enhancing adaptability, teamwork, and rapid problem-solving skills.
- Strengthened development expertise by iterating quickly under pressure, driving continuous improvements.

Smart India Hackathon 2024

- Developed a gamified application using Unity and C# with 3D models, gaining hands-on experience in drone surveying and data interpretation. Built and deployed a web and mobile-compatible app via Vercel, integrating Three.js for interactive 3D visuals.
- Collaborated in high-pressure team settings, strengthening rapid development, problem-solving, and communication skills. Networked with innovators and mentors, gaining valuable technical knowledge and professional insights.

PROJECTS

Gamification for Rural Planning using Drone land survey maps and GIS data

- Built a 3D web app for rural planning with features to design roads, buildings, and village infrastructure. Developed an admin dashboard for Panchayati Raj to monitor and manage planning activities.
- TechStack Used: HTML, CSS, JavaScript (ThreeJs), PHP, MYSQL, GitHub

Digital Twin for CO₂ Capture in Urban Settings

- Developed a digital twin prototype simulating urban CO₂ emissions, dispersion, and capture strategies. Integrated sensor data to visualize hotspots and test interventions like roadside units, vertical gardens, and biofilters. Designed dashboards to predict air quality improvements and support planners in data-driven sustainability decisions.
- TechStack Used: HTML, CSS, Flask, MYSQL, Vercel, Github, historical datasets, live datasets

An AI-Driven System for Crop Disease Prediction and Crop Recommendation Using Weather Forecast Data

- Implemented CNN-based image processing to classify multiple crop diseases, providing detailed insights and prevention suggestions for timely farmer action. Integrated a Random Forest crop recommendation system using parameters like nitrogen, phosphorus, humidity, and soil pH along with user state data. Enhanced recommendations with live weather forecast integration via real-time API calls for accurate, context-aware guidance.
- TechStack Used: React.js, Node.js, Fast API, Rest API, MySQL, CSS, weather forecast live data

EDUCATION

GLS University

June 2023 - May 2027

Faculty of Engineering and Technology

- Bachelor of Technology in Computer Science & Engineering.
- CGPA - 8.87

Cosmos Castle International School

April 2022 - May 2023

CBSE Class 12 - 74%

SKILLS

Technical Skills:

- Languages: JavaScript, Python, PHP, C, C++, Java, HTML, CSS, React.js, Vue.js, Node.js
- Database: MySQL, SQLite
- Tools & APIs: FAST API, REST API, Redis & Celery, API integration (open-meteo api)
- Machine Learning: Image Classification(CNN), Random Forest, ML algorithms

Soft Skills: Problem Solving, Analytical thinking, Team Management, Communication

CERTIFICATIONS & ACHIEVEMENTS

Certifications: Edunet (Green Skills & Artificial Intelligence), Infosys (Internet of Things)

Achievement: 3rd Position at GLS university Internal Hackathon'24, Finalist in SIH'24 & 25 (Smart India Hackathon)
