ABOUT ME

I am a final-year Computer Science student with a deep interest in software development, artificial intelligence, and data-driven solutions. My experience includes building web applications, machine learning models, and database-driven systems through both academic and personal projects. I am proficient in Python, Java, JavaScript, PHP, SQL, and modern development tools. I have practical experience in API integration, object-oriented programming, version control with Git, and working in Agile teams. I am enthusiastic about addressing real-world challenges with technology and am dedicated to expanding my technical knowledge.

EDUCATION

High School | Shri JB Shah English Medium School, Modasa, GJ

B.Tech - Computer Science & Engineering (AI/ML) | GLS University, Ahmedabad, GJ

PROJECT

- **Satellite Image Analyzer**
 - Python · scikit-learn · PHP
 - Trained a multi-class ML model to classify satellite terrain types (desert, forest, cloudy) with image preprocessing pipelines
 - Integrated the model into a PHP web interface for real-time image upload and terrain classification
- **Energy Calculator for a household**
 - Python · Machine Learning · PHP
 - Built an ML regression model predicting household energy usage from inputs like city, locality, and installed appliances
 - Engineered categorical feature encoding and validated accuracy via cross-validation; deployed via a PHP web form
- **HireLoop — AI Resume & Cover Letter Generator**
 - React.js · Node.js · Python · scikit-learn · SQLite
 - Built a full-stack AI web app that tailors resumes to job descriptions and auto-generates cover letters using NLP
 - Developed an ATS scoring engine with scikit-learn using TF-IDF vectorization and cosine similarity for real-time compatibility scores
 - Designed a React.js frontend and RESTful Node.js backend handling ML inference, document processing, and SQLite persistence

SKILLS

- Languages: Python, Java, C, PHP, HTML/CSS, SQL(MySQL),
- ML / AI: scikit-learn, TensorFlow/PyTorch (familiar), NumPy, pandas, Matplotlib, OpenCV, supervised learning, classification, regression, model deployment, data visualization
- Tools & Platforms: Git, GitHub, VS Code, Jupyter Notebook, Linux CLI, REST APIs, Docker (familiar), ETL pipelines
- Concepts: Data Structures & Algorithms, OOP, Machine Learning Pipelines, Database Design, Information Security
- Familiar With (learning): Docker, PyTorch, TensorFlow, cloud deployment, AWS/GCP basics

CERTIFICATIONS

- Software Engineering Job Simulation – JPMorgan Chase & Co
- Green Skills and Artificial Intelligence – Skills4Future Program (NASSCOM / UN Initiative)
- Fundamentals of Java Programming – Board Infinity
