EDUCATION

B.Tech, Computer Science & Engineering - GLS University, Faculty of Engineering and Technology, Ahmedabad

2023 - 2027 | CGPA: 8.36 / 10

12th (GSEB), Shree M.D. Shah Vidhyalaya, Botad - 2023 | 66.67%

10th (GSEB), Shree Nilkanth Vidhyalaya, Botad - 2021 | 85.16%

SKILLS

Languages	Python, SQL
Databases	PostgreSQL, MongoDB
ML/Data	Scikit-learn, TensorFlow, Pandas, NumPy, Matplotlib, Seaborn
GenAI	LangChain, Multi-Agent Systems, Prompt Engineering, RAG, OpenAI/Gemini API
AI Tools	ChatGPT, Gemini, Claude
Deployment	Streamlit Cloud, Vercel, Render
Tools	Git, GitHub, VS Code, Jupyter Notebook, Google colab

PROJECTS

RAG BookAssistant - AI Document Question-Answering System

GitHub: github.com/RutikKanzariya/RAG_Project

- Built a Retrieval-Augmented Generation app enabling natural-language Q&A over uploaded PDFs, grounding answers in retrieved context to minimize hallucination.
- Designed a document pipeline (PyPDFLoader → RecursiveCharacterTextSplitter → Gemini Embeddings → ChromaDB) to chunk, embed, and semantically index content for fast retrieval.
- Applied MMR retrieval to balance relevance and diversity of retrieved chunks, paired with hallucination-resistant prompting that restricts answers strictly to source content.
- Deployed live on Streamlit Cloud with an end-to-end UI for PDF upload, vector DB creation, and querying.

AI Chatbot - Multi-Personality Conversational Assistant

GitHub: github.com/RutikKanzariya/AI-ChatBot

- Built a FastAPI + LangChain backend integrating the Mistral AI LLM to serve real-time conversational responses via a REST API, supporting 3 distinct personality modes (Funny, Angry, Sad) with dynamic tone switching.
- Connected a responsive HTML/CSS/JavaScript frontend to the backend via the Fetch API, enabling real-time request/response communication with sub-second UI updates.
- Deployed backend on Render and frontend on Vercel with interactive Swagger UI docs for all endpoints.

Deepfake Detection System - Multi-modal AI (Image, Video, Audio)

Demo: <https://deepfakespotter.lovable.app/>

- Built an end-to-end deepfake detection system using XceptionNet (visual) and AudioNet (audio) to identify AI-manipulated images, videos, and audio through score fusion
- Engineered a preprocessing pipeline (face extraction, frame sampling, mel-spectrogram conversion) and trained models on FaceForensics++ and FakeAVCeleb datasets
- Developed a Flask web app with real-time inference (<3 sec) and automated PDF reports featuring confidence scores and explainable heatmaps

CERTIFICATIONS

- Green Skills & AI Foundation Course - Edunet Foundation, Shell India & AICTE - AI/ML, NLP, Generative AI & RAG (Jul 2025)

EXTRACURRICULAR

- Won 1st place in Cipher Hunt at Cyber Shadez 2026, a cybersecurity competition organized by GLS University.
- Built a Clinker Allocation & Supply Chain optimization solution in a 36-hour hackathon at Adani University, as a 4-member team.
