SUMMARY

Resourceful Computer Engineer who turns complex operational challenges into clean, scalable systems that run faster and cost less. I blend rigorous architectural thinking with battle-tested expertise in full-stack development and intelligent data pipelines to build infrastructure that grows with the business and tools that eliminate wasted time. Companies need me because I deliver robust, production-ready solutions from high performance backends to predictive model integrations that drive immediate efficiency gains, reduce technical debt, and free teams to focus on what actually moves the needle.

EDUCATION

Bachelor of Technology in Computer Science

GLS University | 2023 – Present

- CGPA: 8.1
- Maintained strong academic performance with demonstrated expertise in AI/ML, Data Structures, Algorithms, DBMS, OOP and Computer Networks through rigorous coursework.

PROJECTS

Agency Workflow Automation | August 2025 – April 2026

- **Tech Stack:** Python, Flask, SQLite, Google Gemini, LangChain, HTML, CSS, JavaScript, Gmail API
- **Impact:** Engineered Python automation scripts for email outreach and document processing, reducing manual administrative workload by 40% (saving approx. 15 hours/week).
- **Automation:** Automated repetitive tasks including cold email outreach, document summarization, and email scheduling, ensuring faster execution and higher accuracy.

Project Lead (Co-Founder)

Colrnx (colrnx.com)

- **Tech Stack:** Next.js, React, TypeScript, Node.js, Supabase, PostgreSQL, Tailwind CSS, Python
- **Architecture:** Built an AI-powered EdTech platform integrating an adaptive learning algorithm to generate personalized user curriculums based on real-time performance.
- **Features:** Designed features for personalized learning pathways and portfolio development, enabling learners to showcase verified skills to prospective employers.

PUBLICATIONS

The Intelligence That Never Leaves | *ScienceOpen Preprints* | April 2026

- **Author:** Daksh Patel
- **Focus/Tech Stack:** Python, Federated Learning, LoRA (Low-Rank Adaptation), Differential Privacy (FedASK Sketching), Jamba-MoE (SSM-Transformer Hybrid), State Space Models (Mamba).
- **Summary:** Authored a paper on enabling privacy-preserving, on-device AI personalization without transmitting raw user data, by combining selective federated fine-tuning with a hybrid SSM-Transformer architecture and provable differential privacy guarantees, demonstrating a 5× improvement in communication efficiency over standard uniform-rank federated LoRA and 30%+ reduction in energy consumption per training round on mobile devices.
- **Status:** Preprint [\[Link\]](#)

CERTIFICATES

- **AWS:** *Academy Cloud Foundations*[157589]
- **NPTEL:** *Recommender Systems, Introduction to Machine Learning*
- **Edunet:** *Artificial Intelligence and Green Skills*
- **Coursera:** *Introduction to Java*

SKILLS

- **Languages:** Python, JavaScript, TypeScript, PostgreSQL, MySQL, C/C++
- **Web Technologies:** React.js, Node.js, Next.js, HTML5/CSS3, Tailwind CSS, Bootstrap
- **Core Concepts:** Data Structures, Algorithms, OOP, DBMS
- **Tools:** Git, Docker, AWS, Supabase, VS Code, PyCharm, Claude
