

JENIL PRAJAPATI

Full Stack Developer | Computer Science Undergraduate

6359488027 | jenilprajapati2626@gmail.com | [linkedin.com/in/JenilPrajapati](https://www.linkedin.com/in/JenilPrajapati) | github.com/rock

TECHNICAL SKILLS

Frontend: React.js, JavaScript (ES6+), HTML5/CSS3, Flutter (Dart), Android SDK

Backend & APIs: Node.js, Python, Java (Core/Advanced), RESTful API design, Firebase

Databases & Cloud: Firebase Realtime DB/Firestore, Google Cloud Platform, Docker, Supabase

AI / ML & Data: TensorFlow, Pandas, NumPy, OpenCV, Computer Vision, Stable Diffusion

Tools & Workflow: Git/GitHub, VS Code, PyCharm, IntelliJ, Eclipse, Android Studio

Languages: Java, Python, C/C++, JavaScript, Dart

FEATURED PROJECTS

Crop Shift Mitigation & Oilseed Optimization

Sep 2025 – Jan 2026

Flutter, Python (ML), SupaBase, Google API | Runner-Up of 100+ teams, SustainAlthon 2025

- Built a full-stack mobile application (Flutter front end, Python ML models, Supabase (Database)) that analyzes soil data to recommend optimal crop rotations, targeting a 20% potential increase in oilseed yield for regional farmers.
- Integrated a predictive climate-risk model (flood/drought) into the app backend, surfacing actionable mitigation insights to **reduce crop failure**.
- Designed a user-centric, real-time mobile interface enabling farmers to visualize crop-shift patterns and live market demand data.

Aapda-Predict — GeoAI Disaster Command Center

Nov 2025 – Dec 2025

Python, Streamlit, OpenCV, Sentinel-1 SAR, Altair, NumPy | Rank 14 of 200+ teams, SkyHack 2025

- Built a full-stack GeoAI web platform that fuses **Sentinel-1** satellite radar data with computer vision to map flood extents through 100% cloud cover, solving the “optical blindness” problem for disaster response teams.
- Engineered a live data-processing and visualization pipeline (OpenCV, Altair, NumPy) that filters radar speckle noise via morphological operations, achieving 98% signal accuracy for real-time water detection.
- Ranked **14th nationally (Top 20 finalist) out of 200+ competing teams** for technical execution and rapid prototyping.

Interior AI — Generative AI Design Tool (Full-Stack)

Jan 2026 – Present

React, Flutter, Python, Stable Diffusion, Computer Vision

- Architecting a full-stack web/mobile application with a React/Flutter frontend and a Python backend that calls a generative AI image model to turn user-uploaded photos into photorealistic room redesigns.
- Designing the end-to-end image pipeline and API layer connecting the client UI to the Stable Diffusion inference service.

ACHIEVEMENTS

- Secured 2nd Prize (Runner-Up) at the Gujarat Innovation Showcase**, organized by **Edunet Foundation**, advancing from **100+ teams to the Top 25 semifinals and Top 8 finals** under the Green Skills and Artificial Intelligence for Future Program.
- Secured **14th Rank (Top 20 Finalist) at SkyHack 2025**, a national hackathon, competing against 200+ teams with the “Aapda-Predict” disaster-management platform (Dec 2025).

CERTIFICATIONS

Foundation Course on Artificial Intelligence and Green Skills

Feb 2026

Edunet Foundation, Shell India & AICTE

EDUCATION

Gujarat Law Society, Ahmedabad

Jun 2023 – Expected May 2027

Bachelor of Technology in Computer Science

Coursework: Data Structures & Algorithms, Object-Oriented Programming (Java), Database Management, Artificial Intelligence
