PROFESSIONAL SUMMARY

Detail-oriented B.Tech Computer Science and Engineering student at GLS University (7th Semester), specializing in Cybersecurity. Hands-on experience in Security Orchestration, Automation and Response (SOAR), incident response, SIEM integration, and threat intelligence. Demonstrated ability to build automated security playbooks, apply JWT-based authentication with role-based access control, and develop ML-powered applications. Seeking a Cybersecurity Internship to leverage skills in network security, vulnerability assessment, penetration testing, and SOC operations.

RELEVANT EXPERIENCE

Security Orchestration, Automation, and Response (SOAR) | *Lead Architect* | GitHub May 2025 – Apr 2026

- Designed and deployed automated security playbooks, reducing Mean Time to Respond (MTTR) to security incidents by 40% through Python-driven SIEM workflow automation.
- Configured API integrations between the SOAR platform and external security tools, including Firewalls, Endpoint Detection and Response (EDR) systems, and Threat Intelligence feeds.
- Developed custom Python scripts to parse incoming alert data, automatically classify incident severity levels, and trigger corresponding response workflows.
- Built a centralized real-time dashboard for incident case management, security event monitoring, and operational reporting.

AgrocastAI – Secure Farm Intelligence Platform | *Backend Developer* | GitHub Jan 2026 – Apr 2026

- Architected a secure Flask backend with JWT access/refresh token authentication and role-based access control (RBAC), protecting farmer and admin API endpoints from unauthorized access.
- Built an ML forecasting pipeline using LightGBM for microclimate prediction and a climate risk engine that dispatches real-time WhatsApp, SMS, and email alerts via Twilio with a retry-based background task queue.
- Integrated satellite data ingestion from NASA and Google Earth Engine alongside Open-Meteo weather APIs; executed multi-farm management with per-farm alert rule configuration and delivery audit logs.

SplitSmart – Cross-Platform Expense Splitting App | *Full-Stack Developer* | GitHub Sep 2025 – Jan 2026

- Developed a cross-platform (Android, iOS, Web) group expense management application using Flutter and Firebase, enforcing Firestore security rules to restrict data access strictly to authenticated users.
- Applied Firebase Authentication with role-based data visibility, ensuring users can only read and write their own financial records, preventing unauthorized data exposure.
- Built real-time cloud-synced expense tracking and debt settlement features using Firestore streams, enabling instant balance updates across all devices.

EDUCATION

Bachelor of Technology – Computer Science and Engineering July 2023 – Apr 2027
GLS University, Ahmedabad, Gujarat | **CGPA: 7.40**

TECHNICAL SKILLS

Programming Languages: C, C++, Java, Python, JavaScript, Dart

Web Technologies: HTML, CSS, REST API Design, Flask, FastAPI

Cybersecurity: Network Security, Vulnerability Assessment, Penetration Testing, Incident Response, SIEM (Splunk / ELK Stack), OWASP Top 10, Security Automation, Security Playbook Development

Security Tools: Kali Linux, Nmap, Wireshark, Burp Suite, Metasploit, VirtualBox

Frameworks and Platforms: Flutter, Firebase, Docker, Git, GitHub

Databases: MySQL, PostgreSQL, Firebase Firestore

Core Competencies: Object-Oriented Programming, Data Structures and Algorithms, JWT Authentication, Role-Based Access Control (RBAC), Agile Methodology

CERTIFICATIONS

Object-Oriented Hierarchies in Java <i>LearnQuest – Coursera</i>	Nov 2024
