EDUCATION

Bachelor of Technology in Computer Science and Engineering GLS UNIVERSITY - CGPA : 8.2	2023 – 2027
Higher Secondary Certificate - Science, Claa XII Little Flower Higher Secondary School - GSEB : 50.76%	2023
Secondary School Certificate, Class X F.D Secondary School - GSEB : 72%	2021

SKILLS

Language & Core : Python, C/C++, Java, OOPs, Data Structure Algorithm, Computer Networks
Web & Framework : HTML5,Flutter, CSS, JavaScript, FastAPI, Node.js, React
AI / ML / Data : Machine Learning, Artificial Learning, Deep Learning, SQL, MongoDB
Tools & Platform : Git, GitHub, Docker, Postman, Vide Coding

PROJECTS

Anvaya – AI-Powered Technology Intelligence Platform (SIH Finalist 2025) Tech Stack: Python, FastAPI, React, LangChain, Ollama, ChromaDB, n8n, Plotly, MongoDB, JavaScript Built an AI-powered technology intelligence platform that analyzes patents, research papers, and market trends to generate technology forecasts, TRL assessment, and strategic insights for defense research. Integrated Hybrid RAG, LLMs, and automated data pipelines to provide real-time analytics, technology maturity tracking, and executive reports.	Oct 2025 – Dec 2025
KodexAI - Code Optimized, Risk Minimized Tech Stack: Flutter Web, FastAPI, Node.js, Python, Llama, Gemma, Mistral, Docker Built an AI-powered code review platform using Flutter, FastAPI, and multiple LLMs (Llama, Gemma, Mistral) to analyze source code, detect security vulnerabilities, generate optimized code, and provide AI-powered explanations for developers. Implemented a secure sandbox environment for code execution with real-time execution visualization and automated security validation.	Jul 2025 – Apr 2026
Enterprise Hybrid RAG Tech Stack: FastAPI, React, LangChain, ChromaDB, Hugging Face, Docker Built an Enterprise Hybrid RAG platform using React, FastAPI, LangChain, Hugging Face, and ChromaDB to enable users to upload PDFs and receive accurate, context-aware answers through semantic search and AI. Developed an end-to-end document processing pipeline with embeddings, vector search, reranking, and LLM-based response generation for enterprise knowledge retrieval.	Jun 2026 – Jul 2026
TravelMind - Personalized Travel Recommendation System Tech Stack: Python, FastAPI, LLM, REST API Built an AI-powered travel recommendation platform that generates personalized itineraries based on destination, budget, travel duration, and user preferences while recommending attractions, restaurants, and local experiences. Integrated AI-driven recommendations to simplify travel planning with day-wise schedules and estimated travel costs.	Apr 2026 – May 2026

CERTIFICATIONS & ACHIEVEMENTS

Smart India Hackathon (SIH) 2025 Finalist	Certificate of Appreciation
AWS Academy Cloud Foundation	Adani Hackathon (Participated)
Java Certification
