Professional Summary

B.Tech Computer Science and Engineering student specializing in Cybersecurity, with project experience building an AI-based keylogger detector, SOC dashboards, log analysis pipelines, and threat detection workflows. Proficient in Python and Bash scripting for security automation, SIEM tools (Splunk, ELK Stack), vulnerability assessment, and penetration testing. Skilled in defending web applications against OWASP Top 10 threats, configuring firewalls and IDS/IPS, and conducting incident response. Seeking a Cybersecurity Internship to apply expertise in network security (TCP/IP, DNS), cloud security, and collaborative security monitoring.

Relevant Experience

AI-Based Keylogger Detector | Project Developer | *GitHub* Sep 2025 – Jan 2026

- Built a real-time behavioral detection engine in Python that scans all running processes every 5 seconds using psutil, classifying each into 5 trust levels and scoring 6+ suspicious signals (unsigned executables, keyboard hooks, persistence registry keys, suspicious network ports) to flag keyloggers without relying on a signature database.
- Trained a Random Forest classifier with scikit-learn for offline CSV-based batch analysis, achieving 94.2% detection accuracy on the test split while supporting scans of up to 10,000 rows per file.
- Achieved a 90%+ detection rate for script-based keyloggers with zero false positives across a clean baseline of 250+ processes, keeping CPU overhead under 1% (target was below 5%) and memory usage at 34 MB.
- Developed a one-click GUI using CustomTkinter for non-technical users, featuring live alert feeds, color-coded HIGH/MEDIUM/LOW confidence alerts, a CSV scan selector, and persistent whitelist management (by hash, path, or publisher)

SplitSmart – Cross-Platform Expense Splitting App | *Full-Stack Developer* | *GitHub* Sep 2025 – Jan 2026

- Delivered a cross-platform expense management application spanning 3 platforms (Android, iOS, Web) using Flutter and Firebase, enforcing 10+ Firestore cloud security rules to restrict data access to authenticated users only.
- Applied Firebase Authentication with RBAC, safeguarding financial records for 50+ test users and lowering unauthorized data exposure risks by 95% through least-privilege access policies.
- Configured real-time cloud monitoring with Firestore audit streams in a cross-functional team, enabling instant anomaly detection and balance updates with sub-second latency throughout all 3 platforms.

Education

Bachelor of Technology – Computer Science and Engineering (Cybersecurity) | *GLS University, Ahmedabad, Gujarat* Jul 2023 – Apr 2027

CGPA: 7

- Relevant Coursework: Network Security, Cryptography, Operating Systems (Linux), Computer Networks (TCP/IP), Information Security, Database Security

Technical Skills

Programming and Scripting: Python, Bash, C, C++, Java, JavaScript, SQL

Cybersecurity Skills: Network Security, Vulnerability Assessment, Penetration Testing, Incident Response, Threat Detection, Log Analysis, Malware Analysis, Security Monitoring, OWASP Top 10, Security Automation

Security Tools: Kali Linux, Nmap, Wireshark, Burp Suite, Metasploit, Splunk, ELK Stack, VirtualBox

Networking: TCP/IP, DNS, HTTP/HTTPS, Firewalls, IDS/IPS, VPN, OSI Model

Cloud and Platforms: AWS (basics), Firebase, Docker, Linux CLI, Git, GitHub

Frameworks: Flask, FastAPI, Flutter, NIST Cybersecurity Framework

Core Competencies: SOC Operations, SIEM Administration, JWT Authentication, Role-Based Access Control (RBAC), Risk Assessment, Security Documentation, Agile Methodology
