PROJECTS

1. CryptWhisper : A Voice-based Authentication App

- Developed a secure voice authentication app that uses voice biometrics and speech recognition for user verification.
- Implemented feature extraction (MFCC) and matching algorithms to ensure high accuracy and security.
- Integrated offline speech-to-text using Vosk for command processing.
- Built with Flutter (frontend) and Python Flask (backend) for a seamless cross-platform experience.

2. House Price Prediction Model

- Developed a machine learning model to predict house prices based on features such as area, location, number of bedrooms, bathrooms, etc.
- Performed data preprocessing, exploratory data analysis, and feature engineering to improve model accuracy.
- Trained and evaluated multiple regression models and achieved high prediction accuracy.
- Built using Python (scikit-learn, pandas, matplotlib) and presented results through visualizations.

CERTIFICATIONS & ACHIEVEMENTS

- Core Java
- SC-900T00-A: Introduction to Microsoft Security, Compliance, and Identity
- Participated in internal Capture the flag (CTF) competition
- Participated in internal Cipher hut competition
- Actively participated in various technical events and workshop
