- Kali Linux

SUMMARY

Aspiring Cyber Security student pursuing a B.Tech in Computer Science and Engineering with a specialization in Cyber Security at GLS University. Passionate about protecting digital environments and solving real-world cybersecurity challenges. Committed to continuous learning with a strong foundation in cybersecurity, networking, and database management.

PROJECTS

• GhostWall Antivirus Toolkit — Python, Cybersecurity

Developed a desktop-based cybersecurity toolkit that enhances endpoint security through malware detection, file protection, USB security, system cleanup, system lockdown, and patch monitoring. Implemented SHA-256 signature-based malware scanning with quarantine support, AES file encryption for secure file storage, password-protected USB access and malware scanning, junk file detection and cleanup, timer-based system lockdown for restricted access, and Windows security patch status monitoring. The project focuses on proactive threat detection, data protection, and system hardening using Python and cybersecurity best practices.

• Electricity Bill Prediction System

- Developed a machine learning-based prediction system that analyzes electricity consumption to estimate the Electricity Bill.
- Used regression models to improve prediction accuracy.

• Track My Cash

- Created a Flutter application to track daily income and expenses with monthly financial analysis and reporting features.
