## PROFESSIONAL SUMMARY

B.Tech Computer Science student (CGPA: 8.60) specializing in AI/ML, NLP, and LLM fine-tuning, with hands-on experience in reinforcement learning (GRPO, LoRA), full-stack AI systems, and data analytics. Built and deployed production-grade ML pipelines including an OpenEnv RL environment (Meta × PyTorch Hackathon 2026) and a DistilBERT-powered healthcare assistant. Seeking an AI/ML internship to apply skills in model training, NLP, and intelligent system design.

## EDUCATION

|                                                                                                                                                                                                                                                                  |                                                                                                                          |

## PROJECTS

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |  |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|
| <b>MediCare — AI Healthcare Assistant</b>   <i>Python, PyTorch, DistilBERT, FastAPI, Flutter, Supabase</i> <ul style="list-style-type: none"><li>Developed a full-stack healthcare app with a DistilBERT disease-prediction model, JWT-authenticated REST API, role-based access (patient/doctor/admin), and auto-generated PDF prescriptions.</li><li>Built Flutter mobile + web frontend (17 screens, 3 roles) with Supabase for auth, database, and cloud storage.</li></ul>                                                                            |  |
| <b>GlobeFlowAI — RL Compliance Orchestrator</b>   <i>Python, PyTorch, GRPO, LoRA, FastAPI, Docker</i> <ul style="list-style-type: none"><li>Built an OpenEnv-compliant RL simulation for AI agents handling international employee relocation across Germany, Singapore, and UAE; achieved avg score of 0.71 using a GPT-4o-mini baseline agent.</li><li>Fine-tuned an LLM using GRPO + LoRA (PEFT) on compliance trajectories; deployed on HuggingFace Spaces via Dockerized FastAPI. Built for Meta × PyTorch × Scaler OpenEnv Hackathon 2026.</li></ul> |  |
| <b>PolicyAssist — RAG-Powered Policy Assistant</b>   <i>Python, FastAPI, Mistral AI, ChromaDB, Next.js</i> <ul style="list-style-type: none"><li>Built a full-stack RAG pipeline allowing users to upload PDF/TXT policy documents and query them via natural language; used Mistral AI for LLM + embeddings and ChromaDB as the vector store.</li><li>Exposed /upload, /ask, and /summarize REST endpoints via FastAPI; built a Next.js + Tailwind CSS frontend with shadcn/ui for document Q&amp;A and grounded summarization.</li></ul>                 |  |

## EXPERIENCE

|                                                                                                                                                                                                                                             |                                  |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------|
| <b>Data Analytics Intern</b><br>IBM SkillsBuild                                                                                                                                                                                             | Jun 2024 – Aug 2024<br>Remote    |
| <ul style="list-style-type: none"><li>Completed training in Python for data science, supervised/unsupervised ML (classification, regression, clustering), and data visualization; built models using scikit-learn and Matplotlib.</li></ul> |                                  |
| <b>IoT Intern</b><br>ADNIINFI Technologies                                                                                                                                                                                                  | Jul 2023 – Aug 2023<br>Ahmedabad |
| <ul style="list-style-type: none"><li>Built hardware prototypes using Arduino UNO and Raspberry Pi Pico W; implemented sensor-to-software communication pipelines.</li></ul>                                                                |                                  |

## CERTIFICATIONS & ACHIEVEMENTS

|                                                                                                                                                                                                                                                                                                                                                     |  |
